

## Cooker Hood Collection

**8th edition**

# AIR MATTERS

Air is without substance: a free spirit. At Faber we can weigh it, measure it, adapt it and shape it like solid matter. Air has been our substance for more than 60 years. Air technology is the reason we work. We are confident about our achievements because we know how to handle it.

Established in 1955 in Fabriano Italy, Faber are the original inventors of the cooker hood for kitchens.

Faber invented the kitchen hood in a small Italian workshop; for decades they have created, designed and manufactured hoods, becoming a global leader in the industry with regards to both production and technology. In Italy, one hood out of every two is a Faber hood. Faber's mission is to design and produce cooker hoods with high quality, technology and efficiency, to satisfy tastes and needs of the most diverse consumers.

Faber are an industrial group with a presence across the globe. They have commercial and production sites in eight nations and three continents. Today, with 60 years experience, key strengths include commitment, solidity, dedication and dynamism, which have always characterised the company. Faber transformed the range hood from a simple built-in element to a beautiful and functional appliance.

Faber do not confuse function with design but they are committed to innovation in both areas. Faber design their models knowing that the hood has a strong visual impact, enhancing and harmonizing the lines of the kitchen, integrating itself without losing its own style. Faber's response to consumer tastes can be seen in the wide range they offer so that every individual can reflect their own style in the kitchen. Faber's hoods are beautiful, ergonomic, efficient, and silent. More importantly, Faber's hoods do what they are intended to: they circulate the air in your kitchen in comfort.

## 1955

Faber Plast is founded.

## 1958

The first Plexiglas hood.

## 1963

EURO

The first compact extractor fan housed in the hood.

## 1976

FL12 & FL15

The first pull-out hoods.

## 1986

NOVA

The first chimney hood.

## 1995

AXIA

The first T-shape hood.

## 1999

M@STER

The first smart hood.

## 2004

MATRIX

The first hood that hangs like a picture.

## 2005

MAGICA

The first self-activated hood..

## 2008

KLIMA

The first air conditioning hood..

## 2009

IMAGO

The first multi-function hood.

## 2010

F-LIGHT GENERATION

The first chandelier hoods.

## 2014

SKYLIFT

The first retractable hood built into the ceiling.

## 2015

Faber celebrate 60 years

## Choosing the right Cooker Hood

Choosing the right hood for your kitchen is not just about visual appeal...

In order to select the most suitable hood for your kitchen, you need to perform some very simple calculations to establish if the hood can extract sufficient volumes in your kitchen.

Simply measure, in meters, the length, width and height of your kitchen to calculate the volume. The volume calculation is performed as follows:

$$\text{Length (m)} \times \text{Width (m)} \times \text{Height (m)} = \text{Volume (m}^3\text{)}$$

Next multiply the volume by 10. The answer will give you the required capacity for your kitchen. When selecting your hood examine the Max Airflow and if the maximum airflow matches or exceeds your required capacity the hood is suitable for your kitchen.

You should also factor in the noise levels as you do not want to have a hood that matches your required capacity but is very loud. A simple guide for noise levels is if the hoods noise levels are below 55dB(A) it will not disturb your normal kitchen life. All hoods show the noise level range with the loudest noise representing the max airflow.

Please note that all extraction rates and noise levels reported within this brochure are in accordance with IEC standards. The IEC Airflow rate is the 2010 certified testing of Cooker Hoods with 1 meter of ducting and 90° angle bend in accordance with CECED Code of Conduct. This Code of Conduct establishes clear rules of measurement common to all cooker hood manufacturers IEC/EN 61591. Please ensure that any cooker hoods you make look at comply with the code of conduct to make an accurate comparison.

Hood can be vented directly out without the use of the chimney

The new Faber diffuser enables a leap in energy quality from Class C to Class A. It also provides high performance with low power consumption.

This technology offers pleasant natural lighting and faithfully reproduces the colour of the illuminated items at just 2W.

85% power consumption (kW/h) at medium-low speeds that are most often used. It is the most silent motor on the market.

Allows the hood to be switched on for 24 hours a day for continuous air renewal with a level of noise that is imperceptible.

Energy Diffuser: it reduces noise up to 3dB(A) and higher hood efficiency by 30% even in the presence of long air outlet.

High Filtration kit that reduces extraction by just 5%, the filter can be placed in the dishwasher and reused

The Evo diffuser has an optimised geometry that results in excellent energy efficiency, reduced power consumption and noise level.

Filter saturation alarm: warns you when it is time to clean the anti-grease filter or substitute the anti-odour filter.

The ability to install the motor away from the hood frees it from architectural constraints and reduces noise in the kitchen.

A high performance filter that only reduces extraction by 15% and lasts twice as long as standard filters

Function which activates maximum aspiration for 6 minutes to meet special cooking needs.

Reduced light intensity with the simple press of a button with low level of energy consumption, light can be left on for long periods of time.

A special range of hoods and hobs that communicate and can be controlled via the hob.

Allows automatic delayed switching off of the motor to complete elimination of residual odours.

Faber hoods with electronic commands come with remote controls, which are particularly useful for people with reduced mobility.

Reduces the perceived sound by up to 25%. (\*) Washable sound-absorbing cushions which sound proof the hood. (\*) Equal to a reduction of 3dB(A) according to norm EN 60704-3

Hoods that have the motor concealed in the main body, thus eliminating the need for a chimney in recycle mode.

Offers maximum comfort and practicality in the kitchen: operated by remote control the hood gently lowers onto the hob increasing its efficiency.

Reduces the perceived sound by 25%. This aspiration guarantees optimised effectiveness

Anti-fingerprint steel, Special anti-fingerprint steel for a perfectly clean hood and a steel surface free of annoying marks.

Double extraction is derived from the overlapping of two glass panels in vertical hoods, ensuring greater hood effectiveness

Eliminates the condensation effect under and around the hood. Controlled air jets released from the hood create two vortices that control the intake of smoke and steam.

## Built In Collection

A range of 17 different hoods in a variety of sizes. The range includes; canopy, integrated and telescopic options. Ideal when you want your hood concealed in the kitchen.

## 104

All extraction rates and noise levels reported are in accordance with IEC standards.

The IEC Airflow rate is the 2010 certified testing of Cooker Hoods with 1 meter of ducting and 90° angle bend in accordance with CECEC **Code of Conduct** which establishes **clear rules of measurement** common to all cooker hood manufacturers IEC/EN 61591

All retail prices include VAT at 23%  
For technical information log onto [www.fff.ie](http://www.fff.ie)

ƒ = Lead times apply for these  
models of up to 6 Weeks

Subject to technical modifications  
and changes to the range without notice

Please note that all extraction rates and noise levels reported are in accordance with IEC standards. The IEC Airflow rate is the 2010 certified testing of Cooker Hoods with 1 meter of ducting and 90° angle bend in accordance with CECED Code of Conduct. The CECED Code establishes clear rules of measurement common to all cooker hood manufacturers IEC/EN 61591. Please ensure that any cooker hoods you make look at comply with the code of conduct to make an accurate comparison.

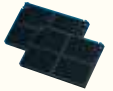

## Ducting Kits

In order to achieve the highest extraction rates a ducting kit should be used. Extraction rates will drop and noise levels will change when the hood is used in recycle mode with filters. All hoods in this brochure can be vented or used in a recycle mode.

Ducting Code	Description	RRP
F02DK120	2 mtr. 120 mm Ø Flexible ducting, External Vent White, 2 x fixing clips	€17

## Charcoal Filters - Standard

Where venting is not possible, use of charcoal filters allows the air to be recycled. Charcoal filters reduce extraction rate by 40% and last up to 3 months. Charcoal filters are available to suit whichever cooker hood you choose. To order replacement filters simply call us on + 353 1 844 8400

Filter Code	Cooker Hood	RRP	
F01CF01	Bella, Gemma, Glove, Look, Nice, Ray, Stilo, Stilo Island, Stilux, T-Light, T-Light island, Tratto Island, Victory, Victory 2.0	€30
